# WEATHER OF CONCERN

## Weather of Concern

- Santa Ana winds will continue through Monday with gusts of 30 to 45 mph for the wind-prone areas of Los Angeles and Ventura Counties. These Santa Ana winds combined with humidities in the teens and single digits, along with very dry fuels, will continue to bring the extended period of critical fire weather conditions to much of Los Angeles and Ventura Counties.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

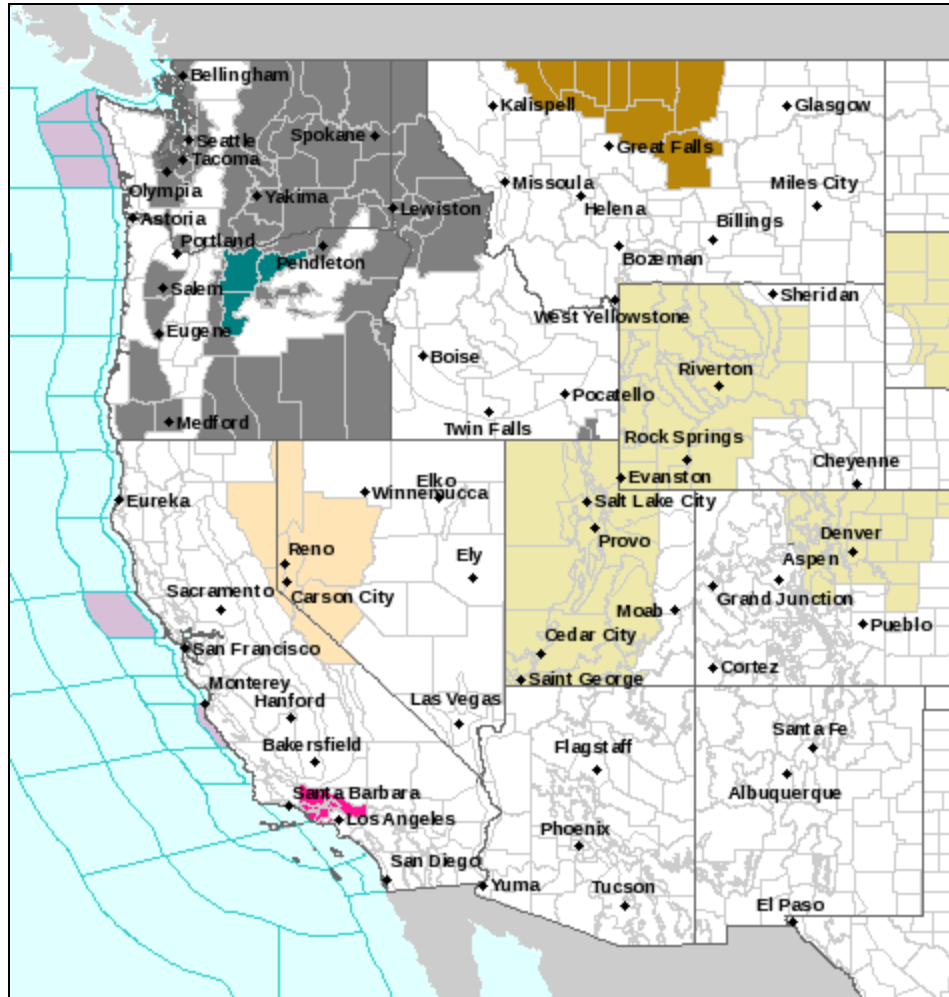

A high pressure ridge will be dominant over the North Ops region for the next several days. Weak waves or perturbations in the flow will nudge the ridge periodically, but an overall dry pattern remains. Humidity values will remain unseasonably dry near term with some single digits and teens across portions of the area. A slight rise in humidity is expected Wednesday. An additional rise in humidity is expected on Friday due to a brief southwest wind pattern. Afternoon temperatures will remain 5 to 15 degrees above normal through the weekend. The wind flow will be somewhat changeable during the next 7 to 10 days. Lighter speeds initially today and Tuesday. Wind speeds should pick up Wednesday and Thursday due to a wave in the flow and corresponding surface cold front. General gusts between 20 to 30 mph favoring the west slopes of the Sierra and Cascade ranges and portions of the Sacramento Valley would occur then. A stronger wind scenario is shaping up for the weekend due to a stronger wave and cold frontal passage. The passage of the front could lead to a very dry and pronounced offshore wind pattern. Confidence in the forecast is high through the next few days and moderate for the weekend period.

## **SOUTHERN CALIFORNIA**

**\*\*Gusty offshore winds along with warm and dry conditions through mid-week\*\*\***

High pressure centered over Nevada will keep the local area warm and dry during the next few days with highs generally in the upper 50s to mid-60s in the mountains, 60s to mid-70s over Central California, and in the 70s to low 80s over Southern California. There will continue to be weak Santa Ana winds across portions of Southern California through mid-week with speeds mainly in the 15-25 mph range along with gusts to around 40 mph. However, there may be an up-tick in these winds later tonight and into Tuesday morning before decreasing on Wednesday. Humidity values will continue to be in the 5-15% range over Southern California and over parts of the Central Coast with continued poor recovery at night. By Wednesday, the area of high pressure over Nevada will migrate westward off the Northern California coast as a trough drops down into the Northern Rockies. Daytime highs will begin to cool by a few degrees across all the region during the latter half of the work week. This will help maintain a dry offshore flow across the region with breezy northeast winds continuing over the southern portions of the state. A weak trough will move through the area on Friday bringing further cooling to the district. The trough will also bring a brief return of onshore flow to the region with better humidity recovery. Winds will turn offshore again later Saturday and into Sunday with weak to locally moderate Santa Ana winds possible over Southern California.
